

Boxfiller BF CK

for carrots, potatoes, onions and much more

Mod. BF CK in mild steel

The Boxfiller BF CK is designed primary for boxes wider than 1200 mm. One single conveyor, always with horizontal infed, goes down in to the bottom of the box before filling starts. This ensures extremely low drop and gentle handling. As the conveyor rises and slowly slides over the top of the box, the filling becomes optimal and no manual levelling of the product is needed.

Gentle filling from the bottom
