

FLOATING OBJECT REMOVER WE EF

Removes floating objects from the water surface..

The machine with options as pump and water spraying system at outfeed.

Produced in stainless blasted steel.

Product is fed in the backend of the machine, and floating objects are scraped sideways and slides over a screen to be separated from as much water as possible. Floating objects can fall directly in to customers box or similar.

Left or right hand version to be set before order.

Can be produced in different versions from 1-50 ton/hour.

Options as pump, levelindicator, freshwater spraying and productfeeder can be provided.

Machine from product infeed side.
