

## BoxBagturner BT H2B

Gentle and effective box and bag emptying

Feeding via parallel double Boxturners.

The Boxturner empty boxes in the upper location and then bring the empty box back to the bottom floor. This function minimizes the changeover-time when changing boxes.

The lowering of the box by the lift table is done when boxes are empty, that way, the wear of the lifting table is minimized.

Can as option also be equipped for the emptying of Big Bags. Big bags are fed on a pallet at floor level. 2 pc. forks hold the pallet in place, while automatic hooks hold the bag. Optional tilt angle through 2 short hydraulic cylinders ensures optimum discharge.
