

## Elevator E - Conveyor C

For general purpose product conveying

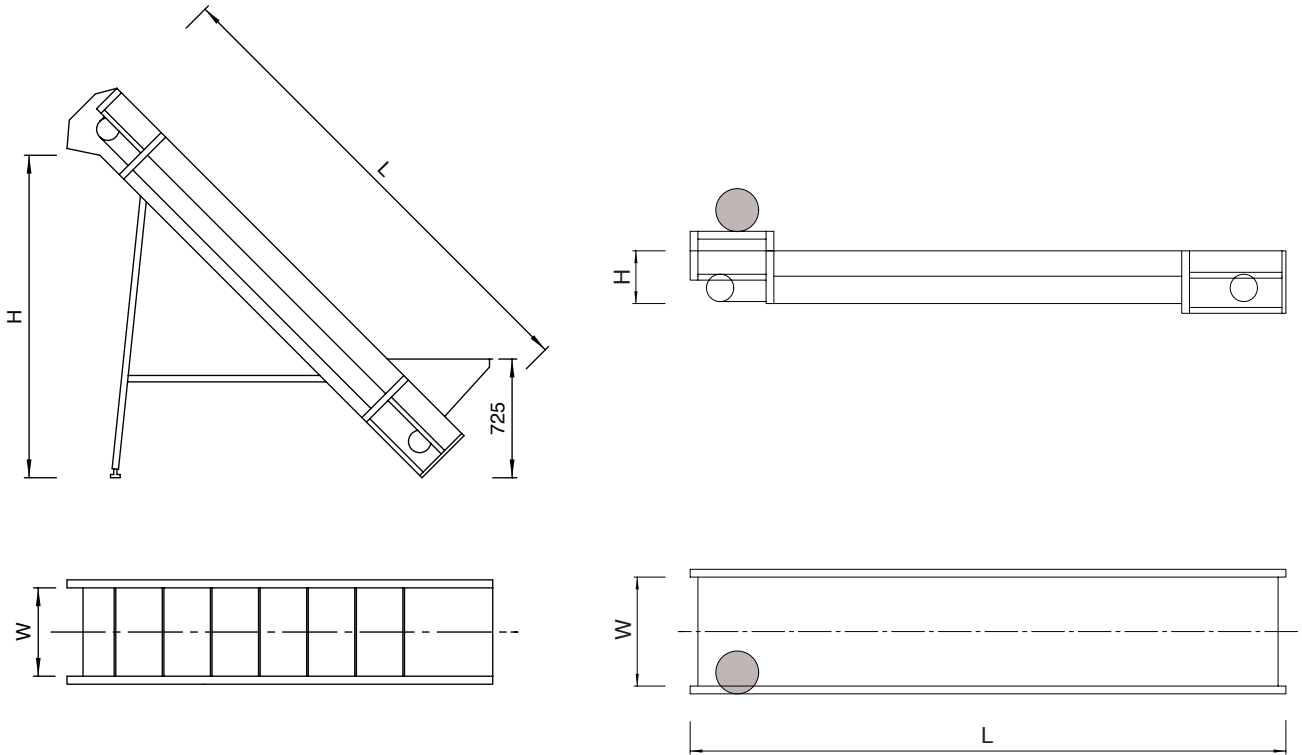

The elevator features a robust design in square steel profiles, and has a rubber conveyor belt with T-50 integral rubber carriers at distances of 300 mm centre-to-centre. The conveyor has an endless vulcanized belt. All bearings are of ball bearing type, factory lubricated and fitted with dustproof seals. The bearing rollers are made of equally robust tubular steel, with ends journalled in ball bearings

and fitted with dustproof seals. All bearings are maintenance-free. The belt is fitted with a scraper that cleans the inside of the conveyor belt and the tensioning roller. The motor is chain-driven, to simplify speed adjustment. Conveyors and elevators are available in various different lengths and widths.

Vertical elevator

Standard widths .....250, 350, 550, 800, 1000, 1200 and 1500 mm  
 Standard lengths ..... 0,3 m – to individual specifications  
 Speed ..... to individual specifications  
 Transmission ..... chain drive, gear ratios to individual specifications  
 Drive unit ..... geared motor, output to individual specifications  
 Electrical connections..... option

The elevator and conveyor is available in a large number of versions, and in different widths to customers' individual specifications. It is also available in different lengths, in steps of 100 mm. The motor can be fitted with a va-

riator or frequency control for continuous speed adjustment. Speed can be set by remote control. The conveyor belt can be divided into sections for use with several different product categories simultaneously. Belts are available in a

variety of versions and materials, including special versions for use in the foodstuffs industry. Also available in a vertical version and one for product retrieval.

- Electrical connection
- Variator gear or frequency control
- Conveyor belts in a wide range of materials
- Cover on topside and/or underside
- Support legs, adjustable and mobile versions
- Available in stainless steel
