

Roller grader G HR

for carrot, parsnip and long shaped product

Grader for 4 sizes

The grader is produced in either mild or stainless steel. It comes in 3 different lengths depending on how many grades that are needed. It is also produced in 5 different widths, from 800-2400 mm. Driven by fixed or stepless adjustable speed. Grading process is done very gentle and with extremely low drops, and at the same time with high capacity. This principle is very good for long shaped products. The inclining in-feed secures that the products are aligned before grading starts.
